

S.M.A.R.T SAFETY SYSTEMS

Safety • Monitoring • Analytics • Real-time Technology

**REAR VISION
SYSTEMS QLD**
"HELPING YOU SEE THE UNSEEN"

*Australia's leading supplier of
SMART pedestrian safety systems*

Providing a complete solution
Detection, Warning, Installation & Service

AI optimised pedestrian coverage
including detection & proximity

Intelligent Vision. Safer Worksites.

SMART Detection

Our AI cameras detect people in real time using on-camera processing, so operator alerts trigger instantly without depending on network coverage, cloud latency, or external hardware.

- Human detection happens at the edge, delivering rapid warnings right where the risk is.
- Works in all conditions — day, night, dust, rain, indoor or outdoor.
- No tags, vests, or wearables required, so there's nothing to forget, charge, or maintain.
- Minimal nuisance alarms, keeping operators switched on and confident in the system.

The result: earlier awareness, faster reaction time, and a safer operating zone around forklifts and mobile equipment.

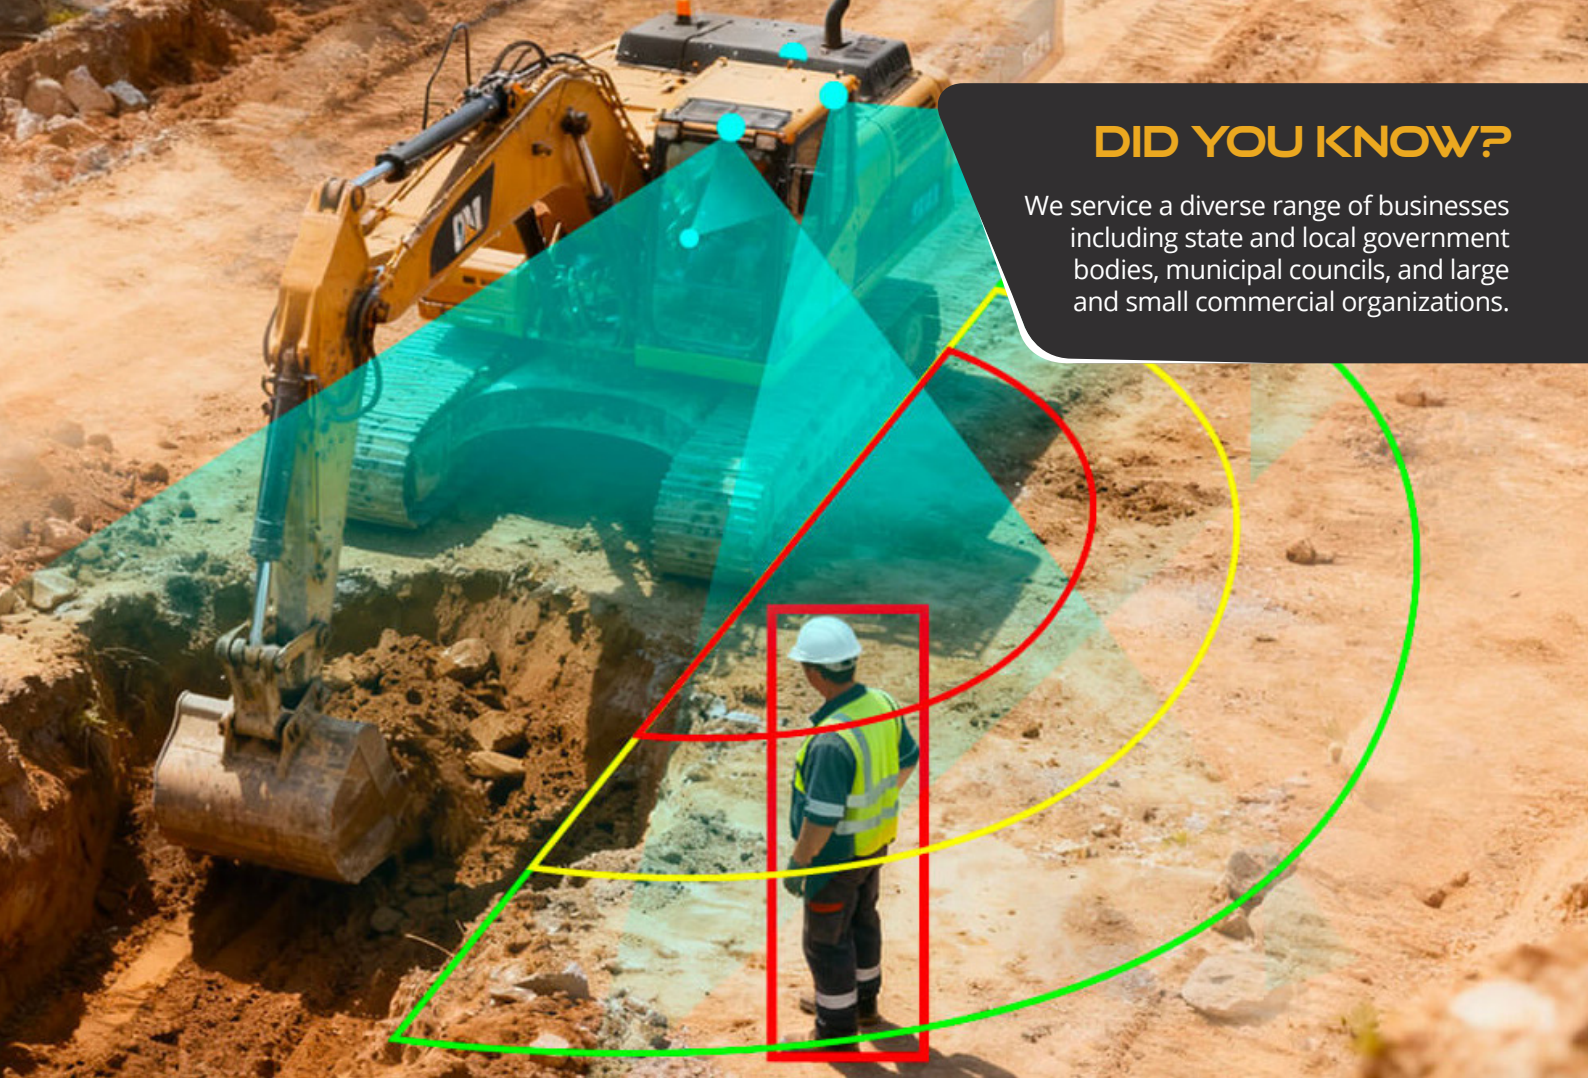

Durable, Wide-View SMART Cameras

*Rugged by design - built tough for
forklifts, trucks, and heavy equipment.*

Built for worksites, not showrooms.

- Ultra-wide coverage reduces blind spots, giving operators clearer situational awareness around the machine.
- Heavy-duty IP69K protection stands up to high-pressure washdowns, water, dust, mud, vibration, and harsh environments.
- Built-in LED indicators and alert buzzer warn pedestrians as they approach, with green, yellow and red lights linked to AI-defined monitoring zones.

This SMART safe gear is engineered for robustness and longevity in the toughest environments.

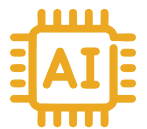

DID YOU KNOW?

We service a diverse range of businesses including state and local government bodies, municipal councils, and large and small commercial organizations.

Safety for every person on site

Be proactive and implement a powerful AI driven pedestrian detection and proximity warning system to protect your people and business assets.

-  Achieve consistently high safety compliance standards and minimise the risk of potential-violations
-  Maintain productivity gains while minimising downtime caused by accident disruptions
-  Achieve a company-wide focus on safety and wellbeing

Reducing the likelihood of workplace accidents directly correlates with a reduction in insurance and workers' compensation costs.

The presence of a robust professionally installed rear vision camera network will also help to identify potential hazards and deter risky workplace behaviour.

From Blind Spots to Confidence

Enhanced Driver & Operator Awareness

Everything the operator needs, right in front of them.

- Near-360° visibility with up to four cameras, creating a complete view around the vehicle or forklift.
- 7" weatherproof HD monitor with single, split, and quad views, so the most relevant angles are always visible when needed.
- Clear on-screen visuals plus audible proximity alerts help operators respond immediately to people, obstacles, and changing site conditions.
- Secure and protected settings prevent unauthorised changes and keep your safety configuration locked in.

Evidence on Demand

When something happens, you need the full story — not guesses. Our rugged mobile DVR captures events, HD video, and machine telemetry in one system, creating a reliable record for incident investigation, coaching, and compliance.

- Continuous recording for full-shift coverage, or event-based recording to automatically save key moments.
- Rugged IP69K-rated housing built for heavy equipment and harsh conditions.
- Optional 4G/WiFi connectivity for live access and remote oversight across your fleet.
- It's evidence you can trust, ready whenever you need to review what really happened.

Safety Control Centre

Turn footage into safety action.

- This gives safety teams the visibility and tools to reduce repeat incidents — not just record them.
- Simple, intuitive dashboard that brings events, trends, and supporting video into one clear view.
- Real-time incident notifications so supervisors can step in fast.
- Secure storage with long-term event history and rapid footage retrieval for investigations or audits.
- Custom reports and automated alerts aligned to your site rules, risk areas, and compliance needs.

Wireless monitoring, precise operations

Digital Intelligence Management

Trusted safety experts for proactive partners

Identify your needs

Warehouse managers or safety officers recognise blind spots, near-miss incidents, or compliance requirements.

Choose your Camera

Our expert sales staff can recommend solution based upon your needs. (front, rear, side, 360-degree or AI-assisted).

Installation & Setup

The system is installed by our skilled technicians and tested to ensure a quality solution for our customers.

Training & Ongoing Support

We provide onsite training, servicing and repairs ensuring the solution continues to enhance safety and reduce incidents.

DELIVERING TAILORED SAFETY SOLUTIONS FOR 30+ YEARS

A trusted market leader servicing clients Australia-wide for more than 30 years, REAR VISION SYSTEMS QLD boasts a unique client-focused process that combines expert sales advice with customised solutions. Our dedicated team of highly skilled technicians provide onsite service support throughout the south-east QLD and northern NSW region.

Rugged by design — built tough for forklifts, trucks, and heavy equipment.

Our extensive range of safety camera systems, obstacle detection and recording systems are designed to perform in the toughest Australian environments across multiple industries.

Proven on real worksites. Backed by a local team that answers the phone.

If you want AI safety that operators trust and work sites rely on, this is it.

Industries we serve

Waste & Recycling

Materials Handling (Forklifts)

Construction

Agricultural

Mining

Logistics & Transport (Trucking)
